

USE-CASE FLOW SPECIFICATION

Use Case: Submit Project

Primary Actor:

Student Team

Preconditions:

1. The Student Team has a registered account.
2. The Student Team has created a showcase profile.
3. The project information is ready for submission.
4. The project GitHub repository URL and required project details
are available.

Postconditions:

1. The project submission is recorded by the system.
2. The project is sent for validation.
3. A successfully validated project becomes eligible for the
showcase catalog.

Main Success Scenario:

1. Student Team logs into the application.
2. Student Team selects Submit Project.
3. System displays the project submission form.
4. Student Team enters the project title and abstract.
5. Student Team provides the demo video link.

6. Student Team provides the GitHub repository URL.

7. System validates the submitted information.

8. System records the project submission.

9. System sends the project for validation.

10. System confirms successful submission to the Student Team.

Alternate Flow — Invalid GitHub URL:

1. Student Team enters an invalid GitHub repository URL.
2. System detects that the URL is invalid.
3. System displays an error message.
4. Student Team corrects the URL.
5. System validates the corrected URL.
6. The submission continues from Step 8 of the Main Success Scenario.
